Technical Skills

AI and Data: Large Language Models (LLMs), Prompt Engineering, Machine Learning, Data Analysis, ETL Pipelines
Languages: Python, Java, HTML, CSS, JavaScript, R, SQL, JSON
Database and Hosting: MySQL, Google Cloud (GCP), Google Firebase
Frameworks: Node.js, Express.js, React.js, Flask, Django, Spring Boot, JUnit
Tools and Libraries: Microsoft Excel, BeautifulSoup, JSwing, JPA, Llama LLM
Developer Tools: Git, GitHub, IntelliJ IDEA, VS Code, Agentic Coding, OpenAI Codex, MCP
Data Visualization: Power BI (Microsoft Certified)

Projects

Spawn Backend | *Java, MySQL, Spring, JPA*

October 2024 - March 2025

- Developed a *Java Spring* backend following *clean architecture* and *RESTful API* principles to support seamless data flow and user interactions.
- Utilized *Java Persistence API* for efficient database management and object-relational mapping.
- Applied *dependency injection* principles to modularize code, improving maintainability and testability.
- Designed backend data flows and service structure to support reliability, performance, and maintainability.
- Collaborated on iterative API design to support mobile product requirements.

MediCompanion | *React.js, CSS, Python*

January 2025

- Developed a web application for nwHacks, Western Canada's largest 24-hour hackathon with **700+ participants**, focusing on leveraging AI for medical assistance.
- Iterated on prompt logic based on user testing feedback and evaluated model accuracy and usability tradeoffs.
- Used *BeautifulSoup* to scrape and analyze **2000+ over-the-counter medicines** and fed it into the Llama model alongside carefully crafted prompts to deliver precise and reliable answers.
- Implemented user context retention to provide personalized recommendations and a centralized place for health data, offering critical support during offline emergencies.
- Conducted rapid product discovery during hackathon to define core user workflows.

Experience

Data Analyst Intern

May - August 2025

Sunshine Elite Homes LTD

Calgary, AB

- Utilized housing market datasets from CMHC and other sources to evaluate rent trends, vacancy rates, and construction profitability across major Canadian cities.
- Built scalable ETL pipelines in Python and SQL to ingest, clean, and model multi-source housing datasets for executives and investors.
- Performed quantitative analysis to identify the most profitable housing types and regions, informing data-driven investment strategies.
- Built interactive dashboards in Power BI to visualize performance metrics and behavior trends for business decision-making.
- Explored automation and AI-assisted workflows to improve data processing and reporting efficiency.

Fullstack Developer

September 2024 - August 2025

UBC Climbing Club

Vancouver, BC

- Created a comprehensive website using *React.js, Node.js, HTML, and CSS*, to manage memberships, showcase events, and provide easy access to media content.
- Designed and implemented a data strategy to ensure the secure and efficient collection, storage, and usage of data, enabling data-driven decision-making for club operations.
- Implemented cloud-based data pipelines using **GCP/Firebase** for authentication, membership storage, and real-time updates.
- Provided the club with a streamlined platform for **150+ members**.

Education

University of British Columbia

Expected Graduation - May 2027

Bachelor of Science in Statistics

Vancouver, BC

- Courses:** Object Oriented Programming, Statistical Inference, Probability, Statistical Modeling for Data Science, Applied Linear Algebra
